

KEEP SPACE FOR PEACE WEEK

OCTOBER 1-8, 2022

DANGERS TO SPACE & EARTH

- Cyber warfare and Space Force
- NATO moving into space
- Environmental impacts from launches
- Nuclearization
- Space Debris

There are many grave dangers to space. There can't be an easy separation between space and Earth.

The launch of tens of thousands of 5G satellites (which have major military applications) are worsening the debris and already crowded orbits.

The nuclear industry and NASA will soon begin testing nuclear reactor rocket engines just over our heads in Lower Earth orbit (LEO).

What could possibly go wrong?

US and NATO are preparing to claim they are the guardians of 'freedom of navigation' in space.

We must call upon our collective governments around the world to stop funding the militarization and nuclearization of space. We must protect our common security if we hope to survive.

The space industry is flying blind—blinded by its devotion to profit and power.

INTERNATIONAL WEEK OF PROTEST TO STOP THE MILITARIZATION OF SPACE
